**Revolutionary MicroSpring Textile offers breathability, moisture transfer and anti-microbial protection not possible with gels, foams or fleece.**

Microfilaments flex to reduce pressure on bony prominences, such as the heel, elbow, vertebra and trochanter. Layers of MicroSpring Textile put up 20 thousand microfilaments per square inch to act as miniature pressure reducing springs.

**DermaSavers offer the following benefits:**

- **Superior** shear and pressure reduction.
- **Breathability** – fabric and filament layers allow air flow.
- **Moisture transfer** away from the skin.
- **Total washability** - DermaSavers can be fully washed even at high temperatures (95°C).
- **Durability** – will not flatten out or become flaky. Will withstand over 75 hot water washes.
- **Stretchy** – knitted garment like fabric has a stretch for comfort and reduced surface friction.
- **Improved hygiene** - permanent anti-microbial protection is bonded into the textile fibres and cannot be washed out. It prevents the growth of micro-organisms on the DermaSavers for the duration of their life.
- **Compatible** with topical preparations, such as lotions, creams and ointments.
- **Latex Free** – 94% Polyester and 6% Spandex.
- **Flame retardant.**

## DermaSaver Skin Protectors

### User Instructions

Please read these instructions carefully prior to use of DermaSaver products, so that you can care for them correctly and achieve optimum effectiveness, durability, comfort and lasting satisfaction.

**Caring for a new item:** DermaSaver products do not require washing prior to first use. However, should you wish to wash your new DermaSaver product before using it for the first time, please follow the washing instructions.

**Usage:** Wearable DermaSavers are SINGLE USER items and should not be passed from user to user! Non-wearable DermaSavers (i.e. bed pads, wheelchair pads) must be thoroughly laundered at high temperature (95°C) prior to passing to another user. Institutional users must always follow cross infection prevention guidance and laundry regulations applicable to their institutions.

**Detergents:** Do not use harsh detergents!

**Fabric Softeners/Conditioners:** There is no need to use fabric softeners.

**Bleach:** Do not bleach!

**Storage and Handling:** Store clean and dry items in dry cupboards and away from potential contaminants like chemicals, liquids and powders. Do not expose to flames and keep away from open fires, electric and gas heaters. Wear gloves and aprons to prevent contamination of personal clothing, when changing, washing or handling soiled items. Always store soiled items separately.

**Replacement:** DermaSavers are very durable and will last for over 75 hot water washes or more without losing their cushioning, shape or comfort. You should discard and replace DermaSaver product, when it is damaged, embrittled or torn.

**Domestic Disposal:** Always wash and dry prior to disposal. When clean, place in a plastic bag before placing with normal waste collection.

**Institutional Disposal:** Follow guidance on waste disposal.

**Using DermaSavers:** DermaSavers are breathable, loose fitting, comfortable and soft to the skin. Always measure accurately for the best fit. For borderline measurements, always choose the size up. When trying DermaSaver first time for fit – always try over another garment (i.e. stocking, long sleeved shirt, tights, etc.)! You can apply your normal and/or medicated creams, lotions or gels to your skin prior to fitting your DermaSaver on.

**Washing:** DermaSavers are fully machine washable at 95°C and can be tumble dried at high temperature. Use normal detergents. Rinse thoroughly.

**Do not bleach!**  
**Do not use solvents to clean stubborn stains!**  
**Do not place directly over hot radiators!**  
**Do not iron!**

## DermaSaver Sizing

### 1. Skin Tubes for Arms (Full Arm Tube, Full Arm Tube with Double Elbow, Elbow Tube, Double Elbow Tube, Forearm Tube, Arm-Bow Tube)
