Follow us on:

HOMEFLOW - UROFLOWMETRY ONLY

Homeflow allows uroflowmetry from home. The uroflowmeter registers volume, time and flow automatically. When the uroflowmeter registers a void, the patient is prompted in the app to complete basic questions such as type of void and urge.

HOMEFLOW - WITH VOIDING DIARY

Homeflow can be used as a fully automated voiding diary. Volume and flow are registered automatically. The patient can add liquid intake or leakage episodes through the Voiding Diary App.

Automatic patient identification

Natural voiding position for men, women and children

Processed at clinician portal
