Venous Insufficiency
Aching, painful, “heavy” legs
Edema of lower legs*

Pregnancy related venous disorders
Post-Thrombotic Syndrome (PTS)
Situations at risk for your veins

...
**Venous Insufficiency**

- Aching, painful, “heavy” legs
- Pregnancy related venous disorders
- Swollen legs or ankles
- Edema of lower legs
- Night cramps*
- Restless legs
- Post-thrombotic syndrome
- Venous Ulcers**

**Situations at risks**

- Professions at risk (waiters, flight crew..)
- Prolonged sitting or standing
- Leg immobilisation (plaster…)
- Long haul flights (> 4h)
- Lack of exercise
- Excessive weight, obesity

---

**REDUCTION OF PAIN IN LEGS**

- Population of venous insufficient patients
  - 94% total reduction
  - 60% partial reduction
  - 34% no reduction

- Population of pregnant women with venous insufficiency
  - 94% total reduction
  - 6% partial reduction
  - 34% no reduction

**REDUCTION OF EDEMA**

Reduction of Ankle Edema in 30 patients (CEAP classification C3) after a 30 day treatment with VEINOPLUS®

- 60% total reduction
- 34% partial reduction
- 36% no reduction

**IMPROVEMENT OF QUALITY OF LIFE**

Improvement of negative impact of venous insufficiency after a 3 week treatment in a population of 38 pregnant women

- 75%* physical improvement
- 89%* psychological improvement
- 84%* social improvement

---

* significant p < 0,001

---

88% satisfaction in our latest users survey**

* in case of venous origin  ** with doctor’s consent

---

*** survey on 100 patients
What is VEINOPLUS®?

VEINOPLUS® is a battery powered electrical muscle stimulator (IEC medical: class IIa). VEINOPLUS® was invented by Dr. Jozef Cywinski, one of the world experts in electrostimulation.

VEINOPLUS®... an efficient technology

VEINOPLUS® stimulates the “calf pump” which is responsible for most of the physiological venous return. Thanks to this action VEINOPLUS® has a unique capability of therapeutic effects on the symptoms of Venous Disease (from a simple pain in legs to more serious conditions). These effects have been demonstrated and documented in several clinical studies made since 2004 in France, UK, USA and Russia.

VEINOPLUS®... a safe technology

VEINOPLUS® meets the most stringent safety standards established in the USA (norm AAMI/ANSI NS-4 1986/2002). VEINOPLUS® can be used even during pregnancy and a clinical study made in France has shown that the use of VEINOPLUS® is harmless for both the mother and the fetus.

Using VEINOPLUS®... nothing easier!

- put one electrode on each calf or if symptoms are unilateral put two electrodes on the same calf
- set up intensity until you feel a strong yet comfortable calf contraction, ... the device stops automatically after 20 minutes.

When using VEINOPLUS®?

Depending upon your symptoms:
- at the beginning one to three times per day (no risk of overuse),
- as soon as symptoms lessen, once per day,
- or more simply just when you feel you need it!

Is there any contraindication?

People with implanted cardiac pacemakers should not use the device.

For other warnings, please refer to the user’s manual.

Any question?

Go to our website www.veinoplus.com or the one of your local distributor.

*effects are not guaranteed; can vary from person to person and depend upon underlying pathologies.
